

Empower Your Business!

The Check In visitor management system relieves workload from security guards and receptionists so that they can focus on service and security instead of spending their time on registration and handing over badges and calling the host.

Manned, partly manned or totally unmanned, it is up to you. We have done it all even outdoors.

A Red Carpet Experience

We help you impress every visitor with a true red-carpet welcome – while fully automating reception check-ins, increasing efficiency, and reducing operational costs.

Easily pre-register visitors with seamless integration to Exchange and Outlook. Eliminate queues and wasted time at reception by enabling fast, self-service check-ins for individuals and groups in all languages to avoid any misunderstandings.

With Check In, visitors, contractors, and truck drivers can access your facilities through outdoor gates, speed gates, floor kiosks, desk kiosks, or wall-mounted kiosks – ensuring a smooth, secure, and modern entry experience.

About Check In

Used by leading offices, factories, and organizations. Check In transforms the way visitors are welcomed. By automating the entire check-in process, receptionists and security personnel gain more time for service and security, not administration of visitors. The result: Measurable cost reductions and a safe, modern way of visitor experience that reflects a professional, high-service organization.

Key Capabilities

- Any language, any reception, any visitor
- Inbuilt SIP-telephony or SMS as notifications
- Centrally managed multi-site support
- Integrated in Speed-gates, elevators and doors
- Outdoor and indoor QR-code readers at gates
- Several models of self service kiosk
- Inbuilt forms for approval, i.e. GDPR
- Integration with Exchange and Entra ID
